DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zempel (2435065).

Zempel (2435065) discloses a composite tool bar having a composite body part with a plurality of bites (14) mounted on the composite body part along a longitudinal direction, the composite tool bar comprising: a first insert (12) inserted into the composite body part while passing through the composite body part, with a bite mounting hole (17) provided in the first insert to receive a bite therein, and a bite height adjusting hole (23) axially aligned with the bite mounting hole in the first insert to receive therein a bite height adjusting bolt (27) for adjusting a height of the bite inserted into the bite mounting hole; and a second insert (13) inserted into the composite body part to be coupled to a

first side of the first insert, with a bite holding hole (17) provided in the second insert to receive therein a bite holding bolt (21) and wherein the first insert is fitted into and fastened to an insert hole, formed through both the composite body part through an interference fitting process.

Zempel (2435065) discloses and substantially all of the subject matter set forth in the claims except for a composite body covered with a covering. To provide the device of with a covering would have been obvious to one of ordinary skill in the art, in view of the since all the claimed elements were known in the prior art and one skilled in the art could have combined the elements as claimed by known methods with no change in their respective functions, and the combination would have yielded nothing more than predictable results to one of ordinary skill in the art at the time of the invention.

Allowable Subject Matter

Claims 3-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 8-10 are allowed.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
